

# DIY Venetian install guide

Thanks for choosing Urban Curtains + Blinds for your new blinds. To help you out we have created this easy to follow install guide.

For each blind you would have received a set of brackets for each side of the blind.

## Inside Fit

Open the end box brackets by lifting the front of each bracket. Do this by lifting the front whilst pressing on the bottom of the bracket to release the locking tab (figure 1).

Set the front of the open bracket 10mm from the front edge of the window frame to ensure the fascia will sit flush with the front of the window frame. If you have been supplied an additional bracket to support the middle of the blind because of the blind length position this near the centre whilst ensuring no interference with blind cords or ladder strings. The back of the centre support bracket should line up with the back of the end brackets.

## Outside Fit

Position the box brackets on the outside of the window frame so they are the same distance apart as the width of the blind measurement you provided. Ensure the blind position is properly centred and level.

Screw in the brackets.

If you have been supplied an additional bracket to support the middle of the blind because of the blind length position this near the centre whilst ensuring no interference with blind cords or ladder strings.

## Fitting your blind

Hold the headrail with the cords facing towards you. Align the blind with the brackets and slide in (A, figure 2).

Lower the front of each bracket ensuring the locking tabs click into place (B, figure 2).

Remove the backing tape from the Velcro on the head rail and position the fascia in place and press hard to ensure fixed firmly.

Done! You can now start enjoying your new blinds. Please remember if you get stuck or have any questions - give us a call.
